

Key Information Document

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Product

The endowment policy without reimbursement of premiums at death is a product provided by LA LUXEMBOURGEOISE-VIE Société Anonyme d'Assurances, hereafter "the Insurer".

Call (+352) 4761 - 1 or visit the website of the Insurer, www.lalux.lu, for further information.

The Commissariat aux Assurances is the supervising authority for the Insurer.

This Key Information Document was produced as at 01/01/2020.

What is this product?

Type

The endowment policy without reimbursement of premiums at death is a life assurance savings contract with a guaranteed interest rate and participation in the profits of the Insurer.

Objective

The objective of the endowment policy without reimbursement of premiums at death is to provide a capital sum if the insured survives to the end of the insurance contract.

The return of the product is equal to the guaranteed interest rate complemented by profit sharing as set out below.

The guaranteed interest rate is fixed at 0,00% per annum. It applies for the entire duration of the contract.

In addition to the guaranteed interest rate applicable to the contract, the Insurer allocates profit shares to those contracts that have run for at least two years which have not been surrendered or been converted to paid-up policies at the time profit sharing takes place. Profit sharing is determined annually on the basis of the results of the Insurer. By its nature, the level of profit sharing cannot be determined in advance and is not guaranteed by the Insurer: The rates of profit share of the past are not a commitment for the future.

All profit sharing that has been allocated is vested upon the policy holder in full and without reservation.

Intended retail investors (Luxembourg market)

Any person that:

- wishes to accumulate a capital sum,
- wishes to benefit from the capital guarantee provided to the surviving policy holder at the end of the insurance contract, as set out below,
- is not looking for any guarantees upon the death of the insured before the end of the insurance contract.

Insurance benefits

This contract may be concluded for one or two insured lives.

If the insured survive(s) to the end of the insurance contract, the beneficiary in case of survival of the insured receives the guaranteed capital sum, complemented by the profit shares allocated to the contract.

In case of death of one (or both) of the insured before the end of the insurance contract, no benefit will be payable under this contract.

An example of the benefit is set out in the section "What are the risks and what could I get in return?"

Premium

You may choose the frequency in which premiums are paid: single premium, annual, semi-annual, quarterly or monthly premium.

The capital at the end of the insurance contract will be lower the more the premium is divided.

Term

The term of the insurance contract is fixed at your discretion.

The insurance contract will end before term in case of death of (one of) the insured.

The Insurer may not terminate the contract before term, except for the cases set out in the law on insurance contracts.

What are the risks and what could I get in return?

Risk indicator

The risk indicator assumes you keep the product for 10 years.

You may not cash in this policy before term.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 2 out of 7, which is 'a low' risk class.

This rates the potential losses from future performance at a 'low' level, and poor market conditions are 'very unlikely' to impact our capacity to pay you.

This product does not include a capital guarantee against default risk. If the Insurer is not able to pay the amounts due, you may lose the full amount of your investment (see section "What happens if LA LUXEMBOURGEOISE-VIE Société Anonyme d'Assurances is unable to pay out?").

Return scenarios

Calculation of returns shown: the return scenarios have been prepared in accordance with the requirements of applicable regulation. They do not, however, constitute a commitment of the Insurer and should not be used to assess the actual return of the product.

Extent of the calculations: form and content of this document have been determined in accordance with the requirements of applicable regulation. These calculations are based on assumptions (annual premium = 1 000 EUR, age of the insured = 35 years old, term of the contract = 10 years, effective duration of the contract = 1, 5 or 10 years). The results of these calculations may therefore be different if you find yourself in a different situation to the one that has been used to prepare this document.

| Premium: 1 000 EUR per annum | | 1 year | 5 years | 10 years (Recommended holding period) |
|---|---|--|---------|--|
| Scenarios assuming survival of the insured at term | | | | |
| Stress scenario | What you would receive after deduction of costs | Surrender of this policy is not possible before term | | 9 497,15 € |
| | Average annual return | | | -0,94% |
| Unfavourable scenario | What you would receive after deduction of costs | | | 9 497,15 € |
| | Average annual return | | | -0,94% |
| Average scenario | What you would receive after deduction of costs | | | 9 497,15 € |
| | Average annual return | | | -0,94% |
| Favourable scenario | What you would receive after deduction of costs | | | 9 681,41 € |
| | Average annual return | | | -0,59% |
| Total amount invested | | 1 000 € | 5 000 € | 10 000 € |

This table shows the money you could get back over the next 10 years, under different scenarios, assuming that you invest 1 000 EUR per year.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products.

The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment/product.

The favourable scenario shown above includes an estimate of profit sharing at a constant rate of 0,35%.

The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The scenario therefore indicates the capital guaranteed, which you will receive in any case and which is not dependent on the financial result of the Insurer.

You may not cash in this policy before term.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What happens if LA LUXEMBOURGEOISE-VIE Société Anonyme d'Assurances is unable to pay out?

Your investment is subject to the risk of default of the Insurer and, for any cash held, to the risk of default of the depositary bank that holds the assets of the insurance contract. Any losses arising are not covered by a compensation system.

However, Luxembourg regulation offers a protection system to investors. The assets representing the commitments to policy holders are held by a depositary bank approved in advance by the Commissariat aux Assurances. These assets are segregated and managed separately from the own assets of the Insurer. If the latter defaults, the policyholders collectively rank before other creditors in respect of these assets, which should allow them priority to recover their claims arising from the insurance contracts.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs.

The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest 1 000 EUR each year. The figures are estimates and may change in the future.

Costs over time

| Investment of 1 000 € per annum | If you surrender after 1 year | If you surrender after 5 years | If you cash in at the end of the recommended holding period (10 years) |
|---|-------------------------------|--------------------------------|--|
| Total costs | 58,10 € 5,81% | 290,52 € 5,81% | 581,04 € 5,81% |
| Impact on return (reduction in yield) per annum | n/a | n/a | 1,09% |

Composition of costs

The table below shows:

- the impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period;
- the meaning of the different cost categories.

| This table shows the reduction in yield per annum | | | |
|---|---------------------------|-------|--|
| One-time costs | Entry fees | 0,37% | These costs are included in the premium. This is the maximum amount you will pay; you may pay less. It includes the distribution costs of your product. |
| | Exit fees | 0,00% | Impact of costs if you cash in at the end of the term of the product. |
| Regular costs | Transaction costs | 0,00% | Impact of costs if the Insurer buys or sells the underlying investments of the product. |
| | Other regular costs | 0,72% | Impact of costs that the Insurer deducts each year to manage your investments. |
| Additional costs | Performance fees | 0,00% | Impact of fees related to performance. The insurer deducts this fee from your investment if the product outperforms the benchmark index. |
| | Profit participation fees | 0,00% | Impact of fees related to participation in excess performance. The insurer deducts this fee from your investment if the product performs better than a given rate of return. |

All costs are calculated for an annual premium of 1 000 EUR, an insured person of 35 years and a term of 10 years.

How long should I hold the product and can I take the money out early?

Recommended holding period: 10 years minimum

Any contract with a holding period under 10 years will not be able to benefit from tax advantages.

Cancellation: You may cancel this contract within 30 days from the time you have been informed that the contract has been concluded. Your cancellation must be received by the Insurer within that time and must be made by registered letter.

Surrender: Surrender of this policy is not possible before term.

How can I complain?

First of all you can contact your agent. You can also transmit your complaint directly to the Insurer:

- per email to the following electronic address reclamations@lalux.lu,
- per mail to the registered office of the Insurer: 9, rue Jean Fischbach, L-3372 Leudelange,
- via the form available on the internet site of the Insurer www.lalux.lu.

If the complaint cannot be resolved satisfactorily, you can address your complaint to the Executive Committee of the Insurer, or ultimately to the Insurance Ombudsman (Médiateur en Assurances). You also have the option to commence judicial proceedings.

Other relevant information

To complement the endowment policy without reimbursement of premiums at death, the Insurer proposes an additional guaranteed option:

- Additional insurance upon accidental death and accidental road death (ACA)

Before entering into the contract, you are required to note the supplementary information contained in the General Terms and Conditions that are applicable to the contract, which are made available to you by the Insurer as a matter of statutory obligation.

The Insurers will provide you annually during the term of the contract and at no cost with

- a tax certificate indicating the premiums paid in the year,
- a document indicating the amount of accumulated savings and the funds that you have invested in.

These documents are provided as a matter of statutory obligation.
